**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-21 and 37-38, drawn to a method of controlling the transport of magnetic beads, classified in class 324, subclass 228.
  - II. Claims 22-36 and 39, drawn to a device for controlling transport of magnetic beads, classified in class 361, subclass 143.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be practiced by the materially different process of liquid filtration, wherein magnetic beads with capture molecules that bind to analytes in a liquid sample are applied to the liquid sample and then removed by the device using a magnetic field, thereby filtering the liquid sample.

Art Unit: 1641

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

In addition, because these inventions are distinct for the reasons given above and the search required for each of Groups I-III is not required for the other Groups, restriction for examination purposes as indicated is proper.

Group I requires searching for the step of applying a series of N magnetic fields and the step of transporting a biospecimen to a specific location on a biochip, which are not required searches for Groups II-III.

Group II requires searching for current-carrying structures positioned sufficiently close together to generate a series of subsequent field minima of magnetic fields, which is not a required search for Groups I and III.

4. A telephone call was made to Mark Abumeri on 23 March 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1641
